

# ABSTRACT OF THE DISCLOSURE

In an optical disk reproducing apparatus, when an extension of a still image file whose reproduction is instructed is JPG, the optical disk reproducing apparatus analyzes a header and determines whether or not the still image file is a still image file of a format capable of reproduction. In the case of determining that the still image file is a still image file of a format incapable of reproduction herein, a video signal indicating its fact is outputted. As a result of this, a user can speedily be notified that the still image file whose reproduction is instructed is a file incapable of reproduction, and operability of the user can be improved.
